ARCHEBIOSIS ARCHITECTS

BUSHLAND RETREAT

RUSTIC MEETS MODERN

Set on an expansive five-acre block in the beautiful Southern Highlands, this Exeter home designed by Archebiosis Architects and built by KELA Building Group sits harmoniously within its natural surrounds.

The clients wanted a brand-new family home that would mix traditional farmhouse style with contemporary architecture. With this in mind, Archebiosis Architects created a design reminiscent of an English village, where four separate buildings combine to create a dwelling of distinction. The beautifully glazed corridors act as bridges between the living spaces, allowing the family to enjoy the spectacular landscape from all aspects.

Located east-west to maximise northern exposure, the central pavilion houses the light-filled kitchen, living and dining area, as well as the kids' bedrooms. The main bedroom, which is located in the east building for optimum privacy, features a walk-in wardrobe, en suite, and a parent's relaxation zone, while the building in the west includes the kid's play room, music room and guest room. To the south, a large double-car garage, spacious laundry and mud room ensure there is plenty of space for tackling housework and messy projects.

With an array of eco-friendly features, the property utilises a passive solar design, as well as a 112kL rainwater tank, solar panel system, and two dams, which help with garden irrigation.

Established in 2013 by Diego Jaime and Edith Clark, Archebiosis Architects is a Sydney-based architectural practice specialising in the design and project management of residential and commercial buildings. With a passion for innovative design and sustainable construction methods, the company takes a considered approach to every project it completes, from the way the building interacts with the natural elements to its wider impact on the broader community.

Every project by Archebiosis Architects is treated with the same attention to detail and utmost care, giving you complete peace of mind.
